IOSH/Notify 'Technology in the Workplace' webinar

Find out how Notify responds to each of the above

Notify's dashboards provide real time insight into safety trends, actions and issues, supporting engagement from the top of the organisation right through to the workforce.

Use Notify to report and analyse unsafe behaviours, then use the data to provide support to employees to challenge and change behaviours.

Clients moving from pen and paper to Notify's platform see on average a 10X increase in levels of reporting – by making it quick and simple for employees to report.

Software developed in-house can deliver benefits, but it's hard to add new features and functions. With Notify, we responded to Covid within a fortnight and we continually improve and update.

Taking on software can be expensive and time-consuming. With Notify, clients can be up and running within hours. Charges start at £30/month, affordable for every size of organisation.

Notify consistently enables clients to increase near miss reporting, typically by 10X previous levels. We provide easy tools to manage the data and get insights to the right people.

It takes around 30 seconds to log a near miss on Notify, and up to 90 seconds to report an incident.

See how Notify can transform Health & Safety in your business. Take advantage of our 14 day FREE trial:
