How Zen Internet are proactively reducing risk, with a centralised view of safety data

About

Partner since: June 2019
Industry: Internet Service Provider
Employees: 550
Company HQ: Rochdale, UK

Challenge

Before partnering with Notify, Zen's Health and Safety was managed via paper-based processes. This was very time-consuming and due to the manual effort involved, it was often an afterthought for many employees. Reviewing any documentation was a challenge, as some documents were uploaded to a PC, and some were not, which caused a logistical nightmare internally

Solution

Notify came highly recommended to Zen as a trusted SHEQ software partner. After an initial review, it was clear Notify was a readily available solution, for all companies who have historically used pen and paper to manage their Health and Safety processes. Notify could also be adapted to help Zen deliver their Health and Wellbeing objectives, making it feel like a bespoke piece of software.

Zen now use Notify throughout all aspects of their safety management process, from DSE Assessments and Staff Medicals to Incident Management. The time Notify saves Zen is invaluable, and it allows their team to review everything in one place, making it easy to identify improvement opportunities.

Results

A centralised view of all safety data

300 corrective actions implemented

Huge time savings

Zen use Notify for Incident Management, Audit and Inspections, Risk Assessments, Safety Intelligence and Actions

zen

Notify

"Notify transformed our safety culture from scattered paperwork to a streamlined, tailored system, saving invaluable time and ensuring comprehensive safety management."

Lee Geirnaert, Health, Safety and Security Manager

"Notify has provided us with a flexible and accessible way of integrating safety and wellbeing into our everyday life and culture, helping to keep our people safe and healthy."

Ayshea Robertson, People and Culture Director / CPO
