

How EPTA UK generated 100x more safety data to reduce accidents

About

Partner since: March 2021
Industry: Manufacturing

Employees: 550
UK HQ: Bradford

Challenge

Prior to using Notify, Epta relied on a card and paper system for near miss and accident reporting. Field engineers were also home based, so if they had an accident or near miss, they had to phone or email their manager, who would then phone the supervisor, who would then inform the health and safety team. It was an extremely slow and inefficient process.

Solution

Epta chose Notify as their H&S software partner as they could tailor the system to their exact requirements. Notify's adaptable and user-friendly Incident Management mobile app was also easy to deploy across the wider workforce. Users don't need to scroll through endless pages to report a near miss either - with Notify it takes less than two minutes - that's with pictures being added too.

Epta now have a system which has everything needed to engage employees to quickly and easily report safety events and ensure a safe working environment for office staff, those working in the manufacturing plants and warehouses and field engineers.

Results

100%+

Increase in near miss reports

A reduction in accidents

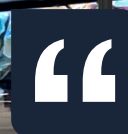

A more engaged workforce

Epta use Notify for, [Audits and Inspections](#), [Actions](#) and [Incident Management](#)

Notify

Notify is a great system for helping to increase the number of near misses and to reduce the number of accidents occurring in a workplace. It's a very quick, easy and simple system to use and it saves me and the business a lot of time."

Nigel Donoghue, Health, Safety and Environmental Manager, UK Operations
