

How NWF Agriculture increased hazard reporting by 230% to safely supply high quality feeds

About

Partner since: June 2021

Employees: 60

Industry: Manufacturing and supply

UK HQ: Nantwich

Challenge

Before implementing Notify's Health and Safety Software, NWF's approach to safety was labour-intensive and inconsistent. The process was entirely paper-based, leading to challenges like lost information, mistakes, and an inability to quickly analyse and act upon safety data. This lack of efficiency resulted in unidentified safety risks being present and increased administrative workload, making it difficult for the safety team to proactively implement safety initiatives.

Solution

NWF chose Notify because of the software's adaptability and cost-effective pricing model. Another major factor in their decision was Notify's approachable and extremely helpful team, who ensured that the system could be tailored to meet NWF's specific needs.

Since the transition, Notify has transformed NWF's safety management approach. Incident and hazard reporting has significantly increased, providing the safety team with better visibility of potential risks and enabling them to assign and implement corrective or preventative actions quickly and efficiently. With all of their safety data now in one place, NWF no longer have to spend time manually searching for information, saving hours on manual admin tasks each week.

Results

230%

Increase in hazards reports within a 2-year period

The ability to proactively mitigate risk

A huge reduction in admin time

Notify

Notify has played a huge part in ensuring our employees stay safe at work. Their fantastic software and App based solution continues to help us proactively spot hazards, so we can get ahead of risks and continue to safely deliver the highest quality products to farmers across the UK."

Dawn Davies, Health, Safety and Compliance Manager
