

# How Stadler Rail UK increased near miss reporting by 87%

## About

Partner since: 2025

Industry: Transport and logistics

Employees: 400

UK Locations: Liverpool, Glasgow, Newcastle, Norwich, Leicester, and Cardiff

## Challenge

Stadler Rail UK faced challenges in gaining a clear overview of safety. Their previous incident reporting process relied on paper forms, making data compilation manual and slow. Reports were often incomplete, complicating analysis. Calculating key metrics like lost time days and LTI rate was labour-intensive, especially under tight deadlines. Stadler Rail UK recognised the need for a smarter, more consistent way to capture and manage safety data.

## Solution

Stadler Rail UK explored several software providers but found that most met only around 75% of their requirements. Then they discovered Notify.

After just one demo, it became clear that Notify could meet all their needs. Better still, it was immediately available, fully customisable, and backed by an attentive support team ready to help at every step.

## Results

87%

increase in close call and near miss reports

37% reduction in lost time incident rate

A stronger, more proactive safety culture

Stadler Rail UK use Notify for [Risk Assessments](#), [Incident Management](#), [Audits and Inspections](#), [Action Tracking](#), and [Safety Intelligence](#).

STADLER

Notify

Notify has gone above and beyond what I needed Health and Safety Software to do. The system has been a huge improvement to our business, helping us increase staff engagement, generate insight, and spend more time with our frontline teams to proactively reduce workplace risks. Notify continue to play a key part in our journey as we begin to improve our safety culture."

Chris Ebsworth  
UK Safety, Assurance & Sustainability Director
